

CR Based Shell

The CR based shell can be thrown with the use of launcher upto 200 meters to the hide outs / agitated mob. The shells when applied emit tear gas for 60-80 seconds after a delay of 5-7 seconds, making the person to come out due to the irritation, suffocation and lacrymation. Due the above properties of CR, it can be used in combating terrorism by flushing out the terrorist alive from their hideouts. CR is a new, potent and less toxic sensory irritant compound. Exposure to CR produces unpleasant responses in human beings like tears, irritation, suffocation, nausea etc. Effects wear off within 30 to 45 minutes.No physiological damage to the human body. More effective and safer compared to other known tear gas compounds. This has been inducted into the services.

- ❖ Useful for peace keeping purposes and combating terrorism for the long range.
- ❖ Can be thrown from a distance to incapacitate terrorists and flushing them out from hideouts (tunnels, fields, dense jungles, broken grounds etc.) without casualties.
- ❖ Highly effective in mob dispersal/riot control operations.
