AVALANCHE WARNING BULLETIN (AWB)

Valid from 25-11-2025 (1700 hrs IST) TO 26-11-2025 (1700 hrs IST)

SN	Districts	Avalanche Danger Level	Altitude (m)	SN	Districts	Avalanche Danger Level	Altitude (m)
(A) UT of Jammu & Kashmir				(B) UT of Ladakh			
1.	Poonch	1		1.	Kargil	1	
2.	Rajouri	1		2.	Leh	1	
3.	Reasi	1		(C) Himachal Pradesh			
4.	Ramban	1		1.	Chamba	1	
5.	Doda	1		2.	Lahaul-Spiti	1	
6.	Kishtwar	1		3.	Kullu	1	
7.	Udhampur	1		4.	Kinnaur	1	
8.	Anantnag	1		5.	Shimla	1	
9.	Kulgam	1		(D) Uttarakhand			
10.	Baramulla	1		1.	Uttarkashi	1	
11.	Kupwara	1		2.	Chamoli	1	
12.	Bandipora	1		3.	Rudraprayag	1	
13.	Ganderbal	1		4.	Pithoragarh	1	
				5.	Bagheshwar	1	
				(E) Sikkim			
Outlook:				1.	North Sikkim	1	
				2.	East Sikkim	1	

DEGREE OF DANGER	DANGER LEVEL	INTERPRETATION		
		Snow condition	Avalanche likelihood	Preferred action
1	Green	Generally safe condition. Snowpack on slopes, if any, is generally stable. Isolated instability may exist.	Rare avalanche activity is possible with high external loading e.g., seismic tremors, explosives etc.	<ul style="list-style-type: none"> Valley movement is generally safe. Movement on snow-loaded slopes with care only after ascertaining its stability. Watch/prepare for higher danger levels.
2	Yellow	Partly unsafe condition. A few avalanche paths are loaded with unstable snow.	Small-size natural triggering is possible on few avalanche paths. Additional moderate external loading by e.g. movement in formation zones may trigger avalanches.	<ul style="list-style-type: none"> Valley movements with care. Movement on snow-loaded slopes, if necessary, with extreme care. Explore slope stabilization by Artificial Triggering. Watch/prepare for higher danger levels.
3	Orange	Unsafe condition. Some avalanche paths are loaded with deep unstable snow.	Natural triggering is possible from some avalanche paths and avalanches may reach the valley in medium size.	<ul style="list-style-type: none"> Restrict movements to carefully selected safer routes through valley only and with extreme care. No movement on snow-loaded slopes. Evacuate from unprotected settlements on/near the avalanche paths. Watch/prepare for higher danger levels.
4	Red	Highly unsafe condition. Most avalanche paths are loaded with deep unstable snow.	Large-size avalanches are likely from most avalanche paths and may reach the valley bottom. Airborne avalanches are likely. Avalanches may follow unexpected flow-paths.	<ul style="list-style-type: none"> Suspend all movements. Evacuate from all settlements on/near the avalanche paths. Watch/prepare for higher danger level.
5	Black	Extremely unsafe condition. All avalanche paths are loaded with deep unstable snow.	Large-size avalanches are likely from all possible avalanche paths even from moderately steep terrain. Airborne avalanches are likely. Avalanches may follow unexpected flow-paths. Some slopes may trigger multiple times.	<ul style="list-style-type: none"> Evacuate from avalanche prone areas.
<ul style="list-style-type: none"> Movement with care: All safety measures to be taken while crossing suspected avalanche path Movement with extreme care: Rescue party shall stand by in addition to above 				

Disclaimer – Above information / warning bulletin is provided after analyzing the current snow and met data from the field stations and projected weather from models. It is our endeavour to analyses the data with utmost care and draw a precise avalanche forecast. However, precautions must be observed during all movements irrespective of the level of danger predicted as snow and weather conditions in mountain may vary rapidly in space and time.
