

Improved Manual Resuscitator

Improved Manual Resuscitator is used to resuscitate the CBRNcasualty who requires assistance for breathing. This modular device is better than the contemporary devices. The device has been specially designed to meet military requirements and stringent requirements of Break Through Time (BTT) in terms of the inflation rate of the rubber bladder.

Salient Features

- Enhanced Inflation rate (>20 nos/min)
- Pressure Release Valve at 40 cm WG
- Special non-rebreathing valve
- Rubber formulation having > 24 Hrs BTT
- Provision for two layered cloth face cover
- Easily replaceable components
- Provision for emergency oxygen inlet
- Rubber hose attachment for easy operation
- Meets revised relevant JSQR

Current Status: User trials completed and user accepted the product
