

Manufacturing of Shaped Miniature Detonating Cord

The Canopy Fragmentation system is part of emergency escape system of aircraft in a two seater aircraft and thus each cockpit has its independent fragmentation system. It uses the shaped Miniature Detonating Cord (SMDC) fixed on the transparency as well as periphery to shatter the canopy bubble during ejection. Suitable initiation system is activated by pilot during emergency for safe ejection.

HEMRL has developed the technology for SMDC for use in pilot ejection system. SMDC is in the form of a continuous explosive filled cord and is fixed by means of adhesive to the inner surface of canopy transparency. The cord is led from the initiator assembly around both the periphery of the transparency and also to form an overhead pattern. Suitable protection is provided for the SMDC using attenuator material to reduce the shock wave. The pattern of SMDC on the canopy transparency is designated to achieve fragilisation of canopy for safe ejection of pilot. The technology of SMDC is available for manufacturing of SMDC.
