

NBC GLOVES

NBC Gloves are to be used for protection of hand respectively in NBC contaminated environment. The materials used for such items are supposed to meet various stringent functional requirements apart from offering NBC protection.

NBC glove is integral part of NBC protective clothing system. The NBC Glove Mk-I have been designed for maximum dexterity with serrations on palm portion and in finger for better grip. It is a combination of right and left hand design (pair). The gloves are developed in three different sizes Large (L), Medium (M) and Small (S).

The Gloves is made of butyl rubber, the most impermeable rubber material. Butyl rubber is used to develop the gloves with judicious selection of different fillers and vulcanizing agents. The fillers provide reinforcing property in the glove and also helps in maintaining the Break through time (BTT) i.e. six hours against toxic chemical like HD mustard. The gloves are provided with separate seamless cotton inner gloves for sweat absorption during use.
