

DIETHYL PHENYL ACETAMIDE SPRAY (DEPA 20% SPRAY)

Introduction:

Insects are carrier (vector) of many dreaded diseases such as malaria, dengue, chikungunya, filariasis, kalaazar etc. Use of repellents is a better method to prevent the painful bites of different blood sucking vectors. DRDE Gwalior has developed DEPA 20% aerosol spray formulation for repelling vectors and organisms such as mosquitoes, sand-flies, black flies, land leeches etc.

Salient Features:

- DEPA has been licensed by the Drug Controller General of India as insect repellent.
- DEPA molecule is included in Indian Pharmacopeia.
- Indian Patent granted.
- Formulation has been licensed by state regulatory authorities for production.

Benefits: The spray formation is easy to apply on fabric, curtains etc. and keeps insect vectors away. It has pleasant fragrance.

How to use: Spray 3-4 puffs in a room and also on curtains, fabrics, bed sheets etc and then enter in the room after 5 min. DEPA spray can be apply on the clothes.
