

NBC OVERBOOT

NBC over boots are to be used for protection of feet and hand respectively in NBC contaminated environment. The materials used for such items are desired to meet various stringent functional requirements apart from offering NBC protection.

NBC overboots are integral part of NBC protective clothing system. NBC overboots Mk-I have been developed by DMSRDE.

The over boots is made of impermeable butyl rubber. The overboot has breakthrough time (BTT) of six hours against the toxic chemical like HD mustard. The multiple piece system are vulcanized simultaneously to provide the shape of overboot. The fillers provide reinforcing property in the glove and also help in maintaining the Break through time (BTT)

The overall weight of each pair of overboots with inner cotton gloves is approx. 1.3kg.
